

Côte D'Ivoire

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Côte D'Ivoire GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components Côte D'Ivoire could include in a comprehensive tobacco control program. The Côte D'Ivoire GYTS was a school-based survey of students in Eme 2-6, Lere and Terminale, conducted in 2003.

A two-stage cluster sample design was used to produce representative data for Côte D'Ivoire. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 86%, and the overall response rate was 86%. A total of 3,548 students participated in the Côte D'Ivoire GYTS.

Prevalence

- 38.1% of students had ever smoked cigarettes (Boy = 52.9%, Girl = 20.2%)
- 18.7% currently use any tobacco product (Boy = 25.0%, Girl = 11.1%)
- 15.6% currently smoke cigarettes (Boy = 22.5%, Girl = 7.4%)
- 5.6% currently use other tobacco products (Boy = 6.1%, Girl = 4.8%)
- 10.2% of never smokers are likely to initiate smoking next year

Knowledge and Attitudes

- 27.8% think boys and 14.6% think girls who smoke have more friends
- 12.8% think boys and 9.2% think girls who smoke look more attractive

Access and Availability - Current Smokers

- 14.4% usually smoke at home
- 43.5% buy cigarettes in a store
- 80.8% who bought cigarettes in a store were NOT refused purchase because of their age
