Population Pyramid

Highlights:

- The death rate from non-communicable diseases (1163 per 100,000 population) was about 0.9 times that for communicable diseases (1340 per 100,000). Tobacco was responsible for 4% of all NCDs compared with 1% of all communicable disease related deaths.
- Within the non-communicable disease group, ischaemic heart disease accounted for 162 deaths per 100,000 population aged 30 years and over, with 4% of these deaths attributed to tobacco. Cancer of the trachea, bronchus and lung accounted for 9 deaths per 100,000 population but with 54% of these deaths attributed to tobacco.
- Within the communicable disease group, deaths attributed to tobacco accounted for 3% of all lower respiratory infection deaths and 2% of all tuberculosis deaths.
- The death rate due to tobacco in men was (119 per 100,000 men aged 30 years and over) compared with women (0 per 100,000 women aged 30 years and over). The proportion of deaths attributable to tobacco was almost 4% for men and 0% for women.

Note 1: The total death rates are crude rates, and not standardized therefore cannot be used for comparison between countries/regions.

Note 2: The estimates above are based on SIR method (see Technical Note), some countries have used other methods which can produce somewhat different but equally valid estimates.
